## 1. GENERAL INFORMATION

Worcester DS/DM UltraSwitch ${ }^{\text {TM }}$ limit switch enclosures provide local and remote position indication for automated valves. An external visual indicator for intuitive local position determination is optional. The DS/DM UltraSwitch ${ }^{\text {TM }}$ is available with a number of limit switch options for remote indication in a variety of electrical applications. They may also be used as a junction box for direct installation of solenoid valves.

## 2. SAFETY INSTRUCTION

Read the safety instructions in this manual carefully before using the product. If any questions arise during installation, contact supplier/sales office before continuing further.

## 3. UNPACKING

Report transport damage to the carrier immediately. In case of discrepancies - contact your nearest FLOWSERVE location.

- Substitution of components may impair suitability for Div. 2 locations.
- Inspect periodically for degradation. Replace parts if degradation is found.
- Cleaning this housing by rubbing should be done in a non-hazardous area.
- Potential electrostatic charging hazard. Clean only with a damp cloth - danger of propagating discharge.
- All grounding and bonding installation requirements must be addressed.
- Pay attention to personal protection, (clothing, glasses, gloves) when performing installation or service.
- Use only Flowserve original spare parts to avoid invalidating certification.
- All installation, inspection and maintenance of the equipment should be performed by suitably trained personnel. In addition, for ATEX, all installation, inspection, maintenance and repair must be done by suitably trained personnel. For more information refer to EN 60079-14:1997, EN 60079-17, EN 60079-18, EN 60079-19.
- Do not disconnect equipment unless area is known to be non-hazardous.
- To prevent ignition of flammable or combustible atmospheres, disconnect power before servicing.

| PT SPST BRS Proximity | Flowserve | XA0157 | 3 A at $120 \mathrm{VAC} / 0.5$ at 24 VDC |

## 6. Installation

A variety of mounting hardware is available for mounting the DS/DM Ultraswitch ${ }^{\text {TM }}$ to valve actuators. For best results, specify the NAMUR shaft option and NAMUR mounting hardware when installing to NAMUR compliant actuator.

The NAMUR mounting hardware allows direct coupling to actuators without adaptors, reducing dead band. Simply bolt bracket to actuator and DS/DM UltraSwitch ${ }^{\text {TM }}$ to bracket, leaving bolts finger tight. For NAMUR applications the DS/DM UltraSwitch ${ }^{T M}$ shaft features an integral alignment pin. This pin must engage the tapped hole in the actuator shaft.

For non-NAMUR applications, make sure to properly install a coupler between DS/DM UltraSwitch ${ }^{\text {TM }}$ and actuator. Once the DS/DM UltraSwitch ${ }^{T M}$ is installed with fasteners loosely tightened, stroke the actuator two or three times to align the bracket. Then tighten all fasteners.

NOTE: External mounting fasteners must not be allowed to bottom. Select length of screws to allow at least one thread turn of clearance against bottom of female thread when screw is tightened (due to approval conditions). See picture below.

NOTE: If the equipment is likely to come into contact with aggressive substances, then it is the responsibility of the user to take suitable precautions that prevent it from being adversely affected, thus ensuring that the type of protection provided by the equipment is not compromised.

Max engaged thread length for mounting fasteners.

### 6.1 Wiring instructions

DS/DM UltraSwitch ${ }^{\text {TM }}$ enclosures feature pre-wired switches. All user connections are made at a numbered terminal strip. Both external and internal grounding locations have been provided for use in installation (see illustration to the right). A wiring diagram is located inside the cover and indicates which terminal numbers correspond to switch contacts: normally open, normally closed, common, etc. Follow the wiring diagram and electric code to connect the switches to your system.

For field wiring: ensure that any excess wire lengths or loops are routed away from any moving parts and are short enough, or secured to ensure a $1 / 4$ " clearance between the wire and the inside surface of the switchbox cover.

Solenoids may also be wired through the DS/DM UltraSwitch ${ }^{\text {TM }}$ enclosure. At least two auxiliary terminals are included as standard. Wire the solenoid to auxiliary terminals, then connect power leads to the opposite terminal side. Be sure to properly ground the solenoid at provided ground terminals.

DS/DM UltraSwitch ${ }^{\text {TM }}$ DS-Series enclosures include two 3/4" NPT conduit/cable entries and the DM-Series include two M25x1.5 conduit/cable entries.

## Caution!

- Proper and suitable conduit plugs must be installed in unused conduit entries before placing the unit into service.
- Install according to National Electric Code, local codes, local certificates and manufacture instructions in all cases. Environmental seals must be used to protect ingress of water through the conduits. Electrical connections/plugs must comply with relevant approval standards.
- Connecting cables must be rated for ambient temperature above $161^{\circ} \mathrm{C}\left(322^{\circ} \mathrm{F}\right)$.

Note: The outside ground terminal of the Aluminum housing has a stainless steel washer underneath the grounding jumper. Make sure that the grounding cable is squeezed between the washer and the grounding jumper (see picture above).

## 7. Switches (certified)

$\triangle$
Substitution of components may impair suitability for hazardous (classified) locations. Do not disconnect equipment unless area is known to be non-hazardous.
To prevent ignition of flammable or combustible atmospheres, disconnect power before servicing.

### 7.1 Installation in hazardous locations

Installation of this device may only be performed by authorized personnel. All wiring and other external components used to connect this device must comply with the hazardous locations regulations.

## Special conditions for safe use

According to ATEX marking on the units indicates:
WARNING: Do not open when energized. After de-energizing - delay 8 minutes before opening.
Seal within 50 mm of enclosure. Connecting cables must be rated for Tamb> $161^{\circ} \mathrm{C} / 322^{\circ} \mathrm{F}$.
According to CSA marking on the units indicates:
WARNING: To prevent ignition of hazardous atmospheres - disconnect before opening.
WARNING: Conduit runs must have seal fittings installed within 50 mm of the enclosure.

### 7.2 Adjusting limit switches

UltraSwitch ${ }^{\text {TM }}$ enclosures feature Quick-Set ${ }^{\text {TM }}$ cams which are used to trip the limit switches. These cams are easily adjusted without tools.

Caution: Disconnect power before removing cover when installed in hazardous locations.

Remove cover and set aside. Rotate actuator/valve to full clockwise (CW) position. Adjust cam(s) associated with CW as follows:

1. Push or pull cam against spring to disengage it from splines.
2. Rotate cam CW breaking contact with switch (or moving magnet away from switch).
3. Continue rotating cam CW just until switch trips.

## 4. Release cam and re-engage it with splines.

Rotate actuator/valve to full counter-clockwise (CCW) position. Adjust cam(s) associated with CCW as described in steps 1 through 4, except rotate cam(s) CCW.

Cam adjustment

Note: factory setting is: Top switch = CW (closed)
Second switch = CCW (open)
Third switch = CW
Fourth switch = CCW

### 7.3 Cam fine adjustment

Some cams have a fine adjustment available. These cams will have a small screw embedded into the side of the cam.

Adjusting this screw clockwise or counter clockwise will deform the cam, changing the trip point slightly.

### 7.4 Adjusting Visual Position Indicator (optional part):

As an option, the DS/DM UltraSwitch ${ }^{\text {TM }}$ can be equipped with a visual indicator located beneath the housing. This ring-type indicator can easily be adjusted using manual force. Simply rotate the indicator by hand to the desired position. Double check that its position corresponds to the position of the valve.

Mounting instructions are included in the box.

### 7.5 Analog feedback option specifications

Option 4-4-20 mA Transmitter
Voltage Supply: 6-30 VAC Impedance: 300 Ohms at 20 mA

Cam fine adjustment

### 7.6 Calibrating 4-20 mA transmitter

Setting direct/reverse action: A dip-switch setting controls the direction of increasing travel. For 4 mA in the full clockwise position, select "D", for 4 mA in the full counterclockwise position, select "R".

Adjusting zero/span:

1. Attach a DC mA meter to +/- terminals.
2. Operate valve/switch box to position corresponding to 4 mA .
3. Adjust feedback board zero trim pot to yield 4 mA . (Turning CW increases value, turning CCW decreases value).
4. Operate valve/switch box to position corresponding to 20 mA feedback.
5. Adjust feedback board span trim pot to yield 20 mA . (Turning CW increases value, turning CCW decreases value).
6. The zero and span adjustments are interactive. Repeat steps 1 through 5 as necessary.

Note: If transmitter adjustment gets difficult (i.e., trim pots do not have desired effect) start again by "centering" the trim pots. This is accomplished by turning in one direction for 20 turns and reversing direction for 10 turns.

6-30 VDC

Flowserve Corporation has established industry leadership in the design and manufacture of its products. When properly selected, this Flowserve product is designed to perform its intended function safely during its useful life. However, the purchaser or user of Flowserve products should be aware that Flowserve products might be used in numerous applications under a wide variety of industrial service conditions. Although Flowserve can provide general guidelines, it cannot provide specific data and warnings for all possible applications. The purchaser/user must therefore assume the ultimate responsibility for the proper sizing and selection, installation, operation, and maintenance of Flowserve products. The purchaser/user should read and understand the (DS/DM Switch box User Instructions) instructions included with the product, and train its employees and contractors in the safe use of Flowserve products in connection with the specific application.

While the information and specifications contained in this literature are believed to be accurate, they are supplied for informative purposes only and should not be considered certified or as a guarantee of satisfactory results by reliance thereon. Nothing contained herein is to be construed as a warranty or guarantee, express or implied, regarding any matter with respect to this product. Because Flowserve is continually improving and upgrading its product design, the specifications, dimensions and information contained herein are subject to change without notice. Should any question arise concerning these provisions, the purchaser/user should contact Flowserve Corporation at any one of its worldwide operations or offices.

For more information about Flowserve Corporation, contact www.flowserve.com or call USA 1-800-225-6989.
